## Technical Information of the Survey

PERFORMER OF THE RESEARCH	Research centre SKDS
POPULATION	Permanent residents of Latvia at the age of 18 to 74
PLANNED SAMPLE SIZE	1000 respondents (representative sample of the general population)
REACHED SAMPLE SIZE	1010 respondents
SAMPLING METHOD	Stratified random sampling
STRATIFICATION FEATURES	Administrative and territorial, and national
RESEARCH METHOD	Personal (face-to-face) interviews at the places of residence of respondents
GECHARTICAL COVERAGE	All regions of Latvia (123 sampling points)
TIME OF SURVEY	From 14.04.2009. to 22.04.2009.

### COMPARISON OF THE REACHED SAMPLE WITH THE STATISTICS OF THE POPULATION

	The number of respondents in the sample (%) before weighting	The number of respondents in the sample (%) after weighting	Data from the Ministry of Interior, Population Register as of 01.01.08.
TOTAL	100.0	100.0	100.0

#### REGION

Riga	33.9	32.2	32.2
Pieriga	16.3	16.8	16.9
Vidzeme	11.3	10.2	10.2
Kurzeme	12.0	13.1	13.1
Zemgale	10.5	12.3	12.3
Latgale	16.0	15.3	15.3

#### SEX

Men	46.3	46.9	46.9
Women	53.7	53.1	53.1

#### NATIONALITY

Latvian	60.3	57.1	57.1
Other	39.7	42.9	42.9

#### AGE

18 - 24	15.0	15.0	15.0
25 - 34	19.7	19.1	19.1
35 - 44	17.6	18.5	18.5
45 - 54	19.8	19.3	19.3
55 - 74	27.9	28.2	28.2

#### EMPLOYMENT STATUS

Employed	56.1	56.1
Unemployed	43.9	43.9

#### EDUCATION

Basic education	10.6	10.8
Secondary, secondary vocational education	67.4	67.6
Higher education	22.0	21.6

#### CITIZENSHIP

LR citizens	85.0	83.7
Respondents without LR citizenship	15.0	16.3

The data were subject to the weighting procedure. Unweighted count and weighted percents were used in the report.

## **Basic terms**

### **SAMPLE**

Micromodel of the population of Latvia

### **REGION**

*Rīga* – Riga city

*Pierīga* – Jūrmala, Limbaži and Limbaži district, Ogre and Ogre district, Rīga district, Tukums and Tukums district.

*Vidzeme* - Alūksne and Alūksne district, Cēsis and Cēsis district, Gulbene and Gulbene district, Madona and Madona district, Valka and Valka district, Valmiera and Valmiera district.

*Kurzeme* – Kuldīga and Kuldīga district, Liepāja and Liepāja district, Saldus and Saldus district, Talsi and Talsi district, Ventspils and Ventspils district.

*Zemgale* – Aizkraukle and Aizkraukle district, Bauska and Bauska district, Dobeles and Dobeles district, Jelgava and Jelgava district, Jēkabpils and Jēkabpils district.

*Latgale* – Balvi and Balvi district, Daugavpils and Daugavpils district, Krāslava and Krāslava district, Ludza and Ludza district, Preiļi and Preiļi district, Rēzekne and Rēzekne district.

### **TYPE OF RESIDENTIAL AREA**

*Rīga* – Riga city.

*Other city* – Daugavpils, Liepāja, Jelgava, Ventspils, Rēzekne, Jūrmala, regional centres, other cities.

*Rural areas* – villages, countryside.

### **EDUCATION**

*Basic* – a respondent having basic or unfinished secondary education.

*Secondary, secondary vocational* – a respondent having general secondary education, secondary vocational or unfinished higher education.

*Higher* – a respondent having higher education.

### **SECTOR OF EMPLOYMENT**

*Public sector* – respondents employed in state institutions or enterprises with the state capital.

*Private sector* – respondents employed in companies with private capital.

*Unemployed* – respondents: housewives, retired persons, pupils, students, unemployed persons.

### **OCCUPATION**

*Manager* – senior or middle level manager: manager of an enterprise, company, organisation, department, a leading specialist in an enterprise or institution.

*Specialist, state official* – state official or employee in a state or municipal institution or private company; does not do a physical job.

*Worker* – ordinary employee in industry, building, agriculture, trading, services, public catering; does a physical job.

*Farmer* – a person who works in his/her own farm.

*Self-employed* – a self-employed person, also a professional specialist (a lawyer, a doctor, etc.), owns his/her business.

*Retired* – a retired person, who is not employed, also retired due to disabilities.

*Pupil, student* – a person who attends a day department of any educational establishment.

*Housewife* – a person who looks after his/her house and currently is not employed; a person on maternity leave.

*Unemployed* – a person in his/her employment age but without work.

### **LEVEL OF INCOME**

Average income per family member in a month, including all types of income (salaries, study grants, benefits, pensions, etc.) after taxes. Income was divided in quintiles.

*Low* – till Ls99

*Medium low* – LVL100 to LVL129

*Medium* – LVL130 to LVL170

*Medium high* – LVL171 to LVL259

*High* – LVL260 and more

## Socio-Demographic Profile of Respondents

**Research:** Attitude towards corporal punishment of children

### The Accuracy of the Results

Using the results it is necessary to take into account the statistical error. The differences, which are within the statistical error limit or less, are considered as *insignificant*.

Statistical error is calculated with this equation:

$$SE = q \times \sqrt{\pi \times (100 - \pi) / n}$$

where :

SE - statistical error;

q - coefficient = 1.96 for 95% probability;

$\pi$  - division of answers (%);

n - number of respondents.

TABLE OF DETERMINATION OF STATISTICAL ERROR

(with 95 % probability )

Division of answers (%)	Sample size [ n ] =															
	50	75	100	200	300	400	500	600	700	800	900	1000	1100	1200	1500	2000

In order to determine the statistical error for definite target group audience the unweighted number n of this target group is needed and the division of answers in percents. Using these values it is possible to find the statistical errors in the corresponding part of the table +/- % with 95% probability.

For example, if as a result of the research 8.5% of all the surveyed population of Latvia (number of respondents n=1010) mentioned that in their opinion corporal punishment as a method of upbringing children can be used if parents consider it as effective, then with 95% probability we can assert that the statistical error here is within + / -1.7%. It follows that 6.8%-10.2% of respondents support the use of corporal punishment as a method of upbringing.

# 1. Opinion about subjecting children to corporal punishment in Latvia

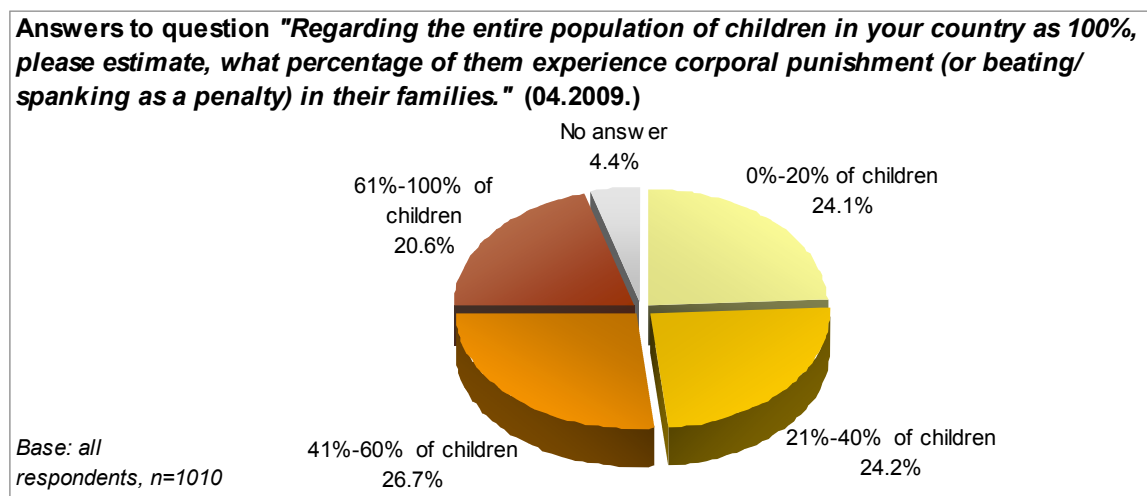

In the survey of Latvia's population carried out in April 2009, the participants of the research were asked to evaluate what percentage of children in Latvia in their opinion is subjected to corporal punishment (beating, spanking as punishment) in their families.

Data about the answers of respondents is summarized in the following chart (it should be added that respondents were not offered variants of answers, they named the appropriate number).

The chart shows that the most frequently mentioned answer is "50%" – the opinion that half of the children in Latvia suffer from corporal punishment (beating, spanking) was mentioned by 16% of respondents. 0.7% of the surveyed think that none of the children in Latvia are subjected to corporal punishment and 1.2% express the opinion that all the children in Latvia are subjected to such means of punishment.

For analytic purposes the data was gathered in larger groups. Data about the proportion of respondents in each group is summarized in the following chart.

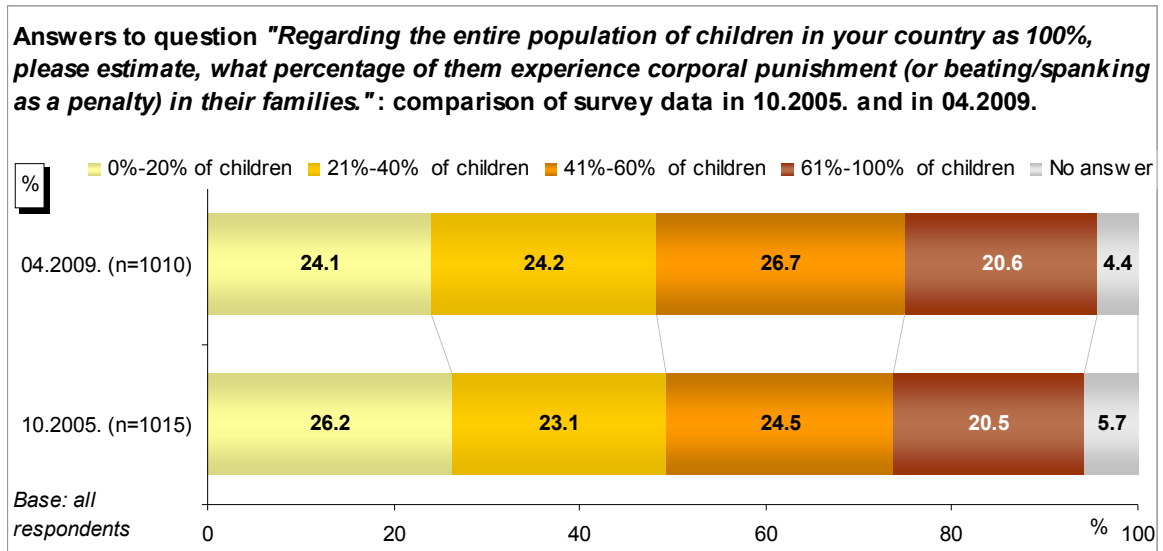

In correspondence with the research data 24% of the population think that up to 20% of children in Latvia are subjected to corporal punishment. Approximately the same

**Research:** Attitude towards corporal punishment of children

number of respondents (24%) believe that 21%-40% of children undergo such means of punishment but the opinion that such punishment affects 41%-60% of children was mentioned slightly more frequently (27%). The numbers from 61% to 100% were named by 21% of respondents.

Respondents answered an analogue question in October 2005. The following chart contains the comparison of data.

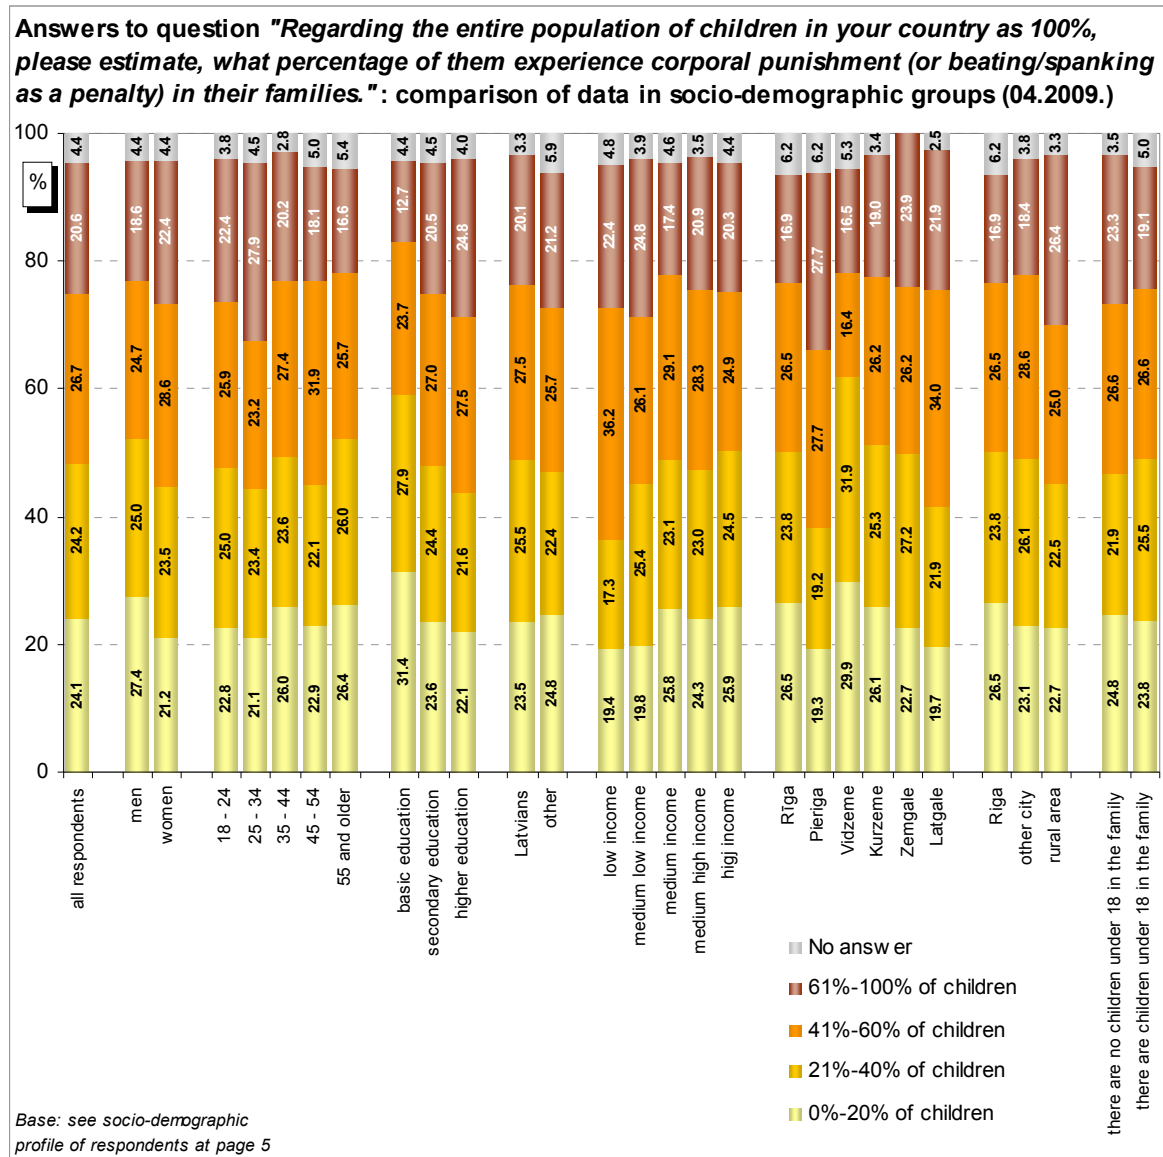

When analyzing data it can be viewed that since the year 2005 the opinion of respondents about the amount of children subjected to corporal punishment has not changed significantly.

**Research:** Attitude towards corporal punishment of children

The following chart summarizes the data about the opinion on this question in different socio-demographic groups.

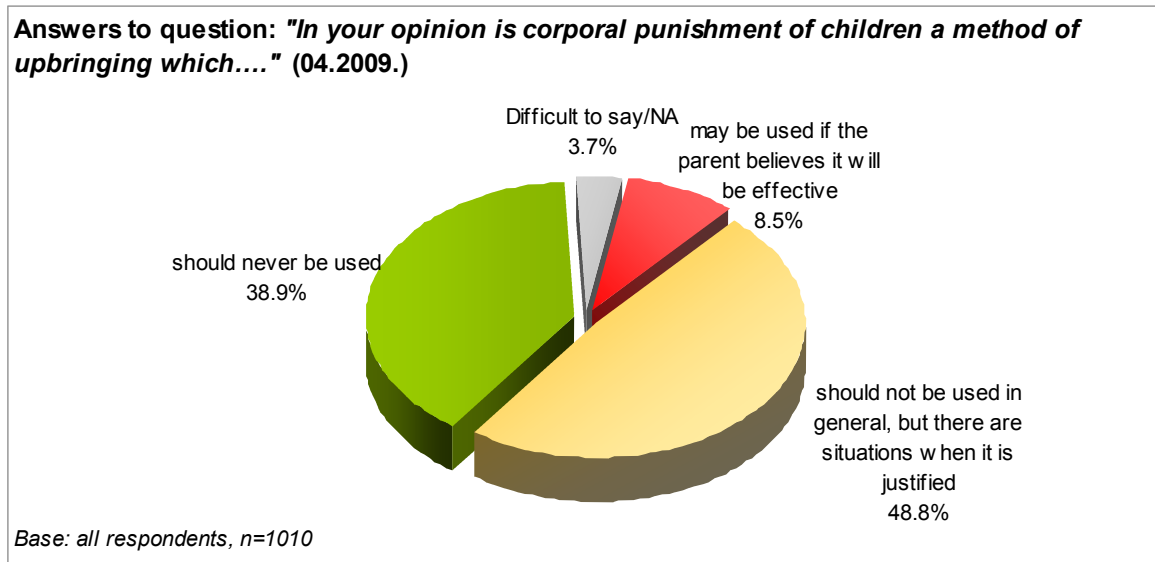

When comparing the answers of different socio-demographic groups about the part of children being subjected to corporal punishment in their families, it can be concluded that the answers "0% to 20%" were more often than average given by men, surveyed with basic education and those who live in Vidzeme.

But the participants of the research in the age from 25 to 34, the group with the higher education, respondents with medium low income, those surveyed in Pierīga and Vidzeme and respondents who live in rural areas more often than average mentioned the opinion that, from their point of view, the majority of children in Latvia (61%-100%) are subjected to corporal punishment in their families.

## 2. Attitude towards corporal punishment as a method of upbringing children

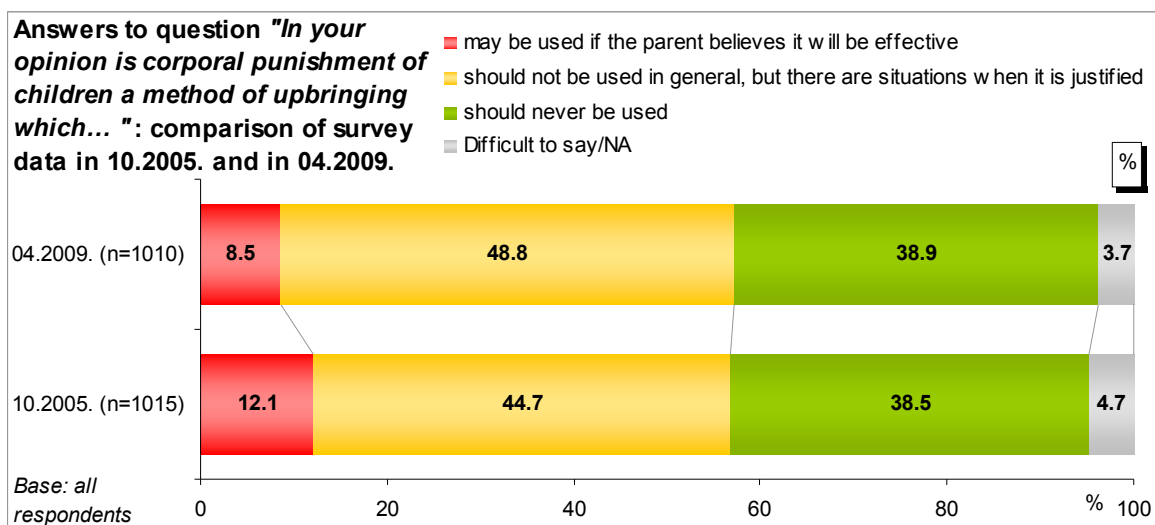

The survey also included a question: *"In your opinion is corporal punishment of children a method of upbringing which..."* The respondents were asked to choose the most appropriate answer among the following: *"may be used if the parent believes it will be effective"*, *"should not be used in general but there are situations in which it is justified"*, *"should never be used"*.

Data about the attitude of the population are summarized in the following chart.

Research data indicates that the majority of respondents think that corporal punishment can be used as a method of upbringing – 9% mentioned that corporal punishment as a method of upbringing *"may be used if the parent believes it will be effective"*, and another 49% said that although it *"should not be used in general there are situations in which it is justified"*. The answer *"should never be used"* was chosen by 39% of respondents.

Data of the year 2005 and 2009 are compared in the following chart.

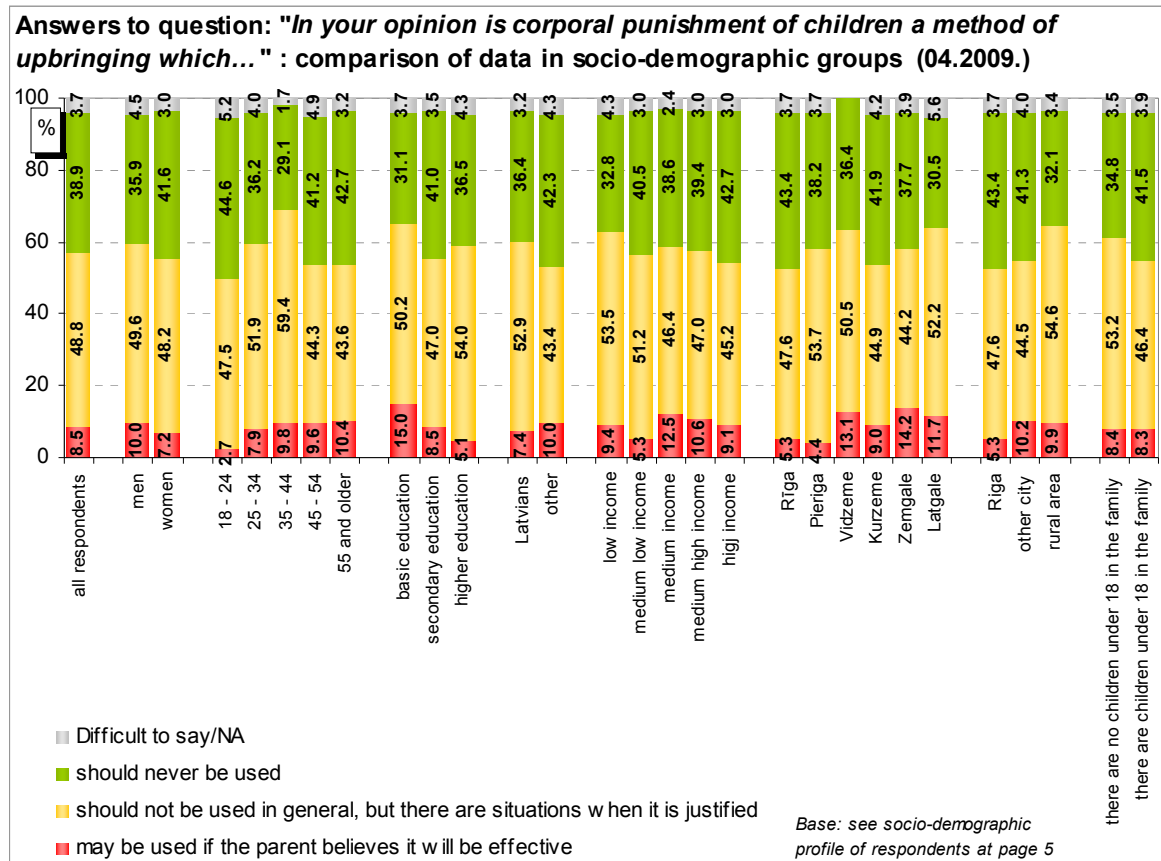

It can be seen that those surveyed in the year 2009 mentioned that corporal punishment as a method of upbringing *"may be used if the parent believes it will be effective"*

**Research:** Attitude towards corporal punishment of children

effective” more rarely (9%) than those surveyed in the year 2005 (12%). However, the frequency of marking the answer “*should never be used*” has not changed significantly (39% in both surveys)

Data about the attitude towards corporal punishment as a method of upbringing among different socio-demographic groups is summarized in the following chart.

According to the results of the survey the fact that corporal punishment can be used as a method of upbringing if parents consider it as effective was more often than average mentioned by respondents with basic education, group with medium income, as well as by the participants of the research in Vidzeme, Zemgale and Latgale.

The variant of answer “should not be used in general, but there are situations in which it is justified” was mentioned more often than average by the population in the age from 25 to 44, the surveyed with higher education, Latvians, respondents with low income, those surveyed in Pierīga and Latgale, those living in the rural areas and the participants of the research who have children younger than 18.

But the respondents in the age from 18 to 24, those older than 55, representatives of other nationalities, group with high income, as well as those surveyed in Rīga and Kurzeme more often than average are in favor of the opinion that corporal punishment should never be used as a method of upbringing.
